CIS 263 Introduction to Data Structures and Algorithms
Backtracking

Minimum Spanning Tree

- We have to find spanning Trees with the minimum cost
  - Search all combinations
  - Approximation Algorithms
    - **Greedy Algorithms**
      - Prim's Algorithm
      - Kruskal's Algorithm

- Uses heuristics
- Solution may not be optimal
Optimization Problems

Greedy Algorithms
- Mainly Heuristics based

Bruteforce
- Constraints based

Optimization Problems

Greedy Algorithms
- Mainly Heuristics based

Bruteforce
- Constraints based
- Backtracking

Backtracking
- You have to fill the boxes
- No condition
- 3! solutions

R1 R2 G1

Backtracking
- You have to fill the boxes
- No condition
- 3! solutions

State Space Tree

Backtracking

- You have to fill the boxes
- Conditions
  - Green cannot be in the middle
- Exclude some of the 3! Solutions
- Bruteforce search
  - Apply condition as a bounding function
  - Apply Backtracking

State Space Tree

Backtracking

- You have to fill the boxes
- Conditions
  - Green cannot be in the middle
- Exclude some of the 3! Solutions
- Bruteforce search
  - Apply condition as a bounding function
  - Apply Backtracking (Preorder Traversal)

State Space Tree

Backtracking

- You have to fill the boxes
- Conditions
  - Green cannot be in the middle
- Exclude some of the 3! Solutions
- Bruteforce search
  - Apply condition as a bounding function
  - Apply Backtracking (Preorder Traversal)

State Space Tree

Backtracking
- You have to fill the boxes
- Conditions
  - Green cannot be in the middle
  - **R2 cannot be in the first box**
- Exclude some of the 3! Solutions
- Bruteforce search
  - Apply condition as a bounding function
  - Apply Backtracking (Preorder Traversal)

State Space Tree

Backtracking

- Condition: Two adjacent nodes cannot have the same color
- Can we do it with 2 colors say {Red, Green} ?
Backtracking

- You are asked to make a NHL schedule, and here are the conditions:
  - You have 3 teams: {A, B, C, D}
  - A team can play only one game a day
- Q: What's the minimum number days your schedule will require?

Backtracking

- You are asked to make a NHL schedule, and here are the conditions:
    - You have 4 teams: {A, B, C, D}
    - A team can play only one game a day
- Q: What's the minimum number days your schedule will require?
- Lets first try for 3 teams

Backtracking

- You are asked to make a NHL schedule, and here are the conditions:
    - You have 4 teams: {A, B, C, D}
    - A team can play only one game a day
- Q: What's the minimum number days your schedule will require?
- Lets first try for 3 teams: {A, B, C}

- Answer: 3 days
- Can we do it in less than 3 days?
  - Answer: No
- What are your scheduling options; or How many combinations of days/dates you may have?
 - Answer: 3! (the first toy example we did.)

Let's go back to our original question!

Let's go back to our exact question!

Graph Coloring Problem

- You are asked to make a NHL schedule, and here are the conditions:
  - **You have 4 teams: {A, B, C, D}**
  - A team can play only one game a day
- Q: What's the minimum number days your schedule will require? 4 or 3 or some other number of days ?

Let's go back to our exact question!
Graph Coloring Problem

- You are asked to make a NHL schedule, and here are the conditions:
  - **You have 4 teams: {A, B, C, D}**
  - A team can play only one game a day
- Q: What's the minimum number days your schedule will require? or 3 or some other number of days ?
- Answer: 2 days (2 colors)

Is this the only solutions?

Let's go back to our exact question!

Graph Coloring Problem

- You are asked to make a NHL schedule, and here are the conditions:
  - **You have 4 teams: {A, B, C, D}**
  - A team can play only one game a day
- Q: What's the minimum number days your schedule will require? or 3 or some other number of days?
- Answer: 2 days(2 colors)
- What are your scheduling options; or How many combinations of days/dates you may have?

Both valid!

Let's go back to our exact question!

Graph Coloring Problem

- You are asked to make a NHL schedule, and here are the conditions:
  - **You have 4 teams: {A, B, C, D}**
  - A team can play only one game a day
- Q: What's the minimum number days your schedule will require? 4 or 3 days ?
- Answer: 2 days(2 colors)
- What are your scheduling options; or How many combinations of days/dates you may have?
  - Backtracking solution

Both valid!
